Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 01 March 2004.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 10 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
3. Claim 10 recites the limitation "said retention hooks" in lines 4-5. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-2 and 4-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Shibata et al. (4456318).

Shibata (Figures 1-7) shows an electrical connector comprising a socket housing 1 holding an array of contacts 4, a load plate 10 rotatably coupled to the housing between an open position and a closed position wherein the load plate has a channel to receive an electronic package in the open position and a handle 12 rotatably coupled to the housing locks the load plate in closed position. The load plate has first and second opposed sides extending between a forward latching end to a rearward pivoting end

Art Unit: 2839

and the sides have downwardly curved portions. The first and second sides have retention hooks defining a channel, a third side with a stop and a fourth side to receive the package. The opening of the load plate is limited to restrict access to the array of contacts. The housing has a base including an array of cavities for holding the array of contacts. The perimeter wall has cutouts to receive the hooks of the load plate.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 3 and 7-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shibata et al. (4456318).

Shibata shows all the features of these claims except a biasing member, a recess in the housing, a key, a lip and a guide member with a ramp for orienting the package. Official notice is given that these features are well known and widely used in the art of electrical connectors. It would have been obvious to one of ordinary skill in the art at the time of the instant invention to provide these features because this would provide a biasing means to bias the load plate in open position, a recess for receiving the package, a means to align and smoothly guide the package in the recess in the housing as is well known in the art.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Howell et al. (6371786), Trout et al. (6485321) and Yu (2004/0224548), and Plocek et al. (4826440).
